

notarity

From zero to notary appointment in 3 minutes.

notarity turned manual notary scheduling — multiple emails and calls — into one online form. We want you to reimagine that form and make booking an appointment genuinely intuitive, especially for people who have never been to a notary before.

Track partner	notarity
Team size	2–4 people
Prize	€1,000 cash + company incorporation + founder mentorship + more
Code freeze	Sunday, June 7, 14:00 sharp

About notarity

notarity is a fully digital notarisation platform. We let businesses get documents notarised and apostilled online — in minutes instead of days or weeks. Through a network of partner notaries, our clients can notarise documents for nearly every country in the world. Our expertise is cross-border B2B notarisation: powers of attorney, shareholder resolutions, incorporations, certified copies, compliance filings — the high-trust, high-stakes paperwork that traditionally meant physically showing up at a notary's office (and in some cases the ministry of foreign affairs and an embassy to get documents legalised for cross-border transactions). The whole process runs online, and physical wet-ink originals can still be shipped worldwide when a deal needs them.

We're real and growing. 1,000+ businesses worldwide use notarity (including refurbished, Bitpanda, Speedinvest, Oyster), and S&P 500 companies run multi-country, multi-signer notarisation processes on the platform. We cut up to 90% of the admin work out of the process, inside a GDPR-, eIDAS- and KYC-compliant, certified-data-centre setup.

For a room of ambitious builders, notarity sits right where law, trust and software collide. We're turning a centuries-old, paper-and-presence ritual into something that should feel like modern SaaS. What you build on this track could ship to real enterprise customers.

The Problem

Today, every client who needs a remote notarial appointment has to work through a multi-page booking form. The form is highly configurable (country rules, product catalogs, participant setups, time slots, billing and contact details, hard-copy and express shipping options, T&Cs, preferred notary, newsletter opt-in) — all driven by conditional rules that change per use case, country and company. A typical client sees four pages of fields and has to know upfront which product they actually need and what country the document will be used in.

The booking flow is where most of our customers have their first touchpoint — a make-or-break moment. The people affected are often founders, lawyers, executives or private individuals, usually at a stressful moment. Every abandoned form is a real legal transaction that didn't happen, and a client who falls back to the tedious manual appointments they were trying to escape. Fixing this unlocks faster time-to-appointment, higher conversion, fewer support tickets, and a first touchpoint that finally feels effortless.

The Challenge

Rethink our booking experience so that any notary client can complete a valid, fully-configured appointment booking — country, product, participants, time slot, contact and billing details, shipping and consents — in under 3 minutes, while still respecting every conditional rule defined in the underlying booking-form config.

We're looking for an intuitive way to guide users through the journey: an assistant, an entirely new booking flow, or something we haven't thought of. Clients often arrive with a document in hand but no idea what to do with it.

What You're Building

Picture a client who lands on the booking experience holding a document and not much else: they don't know which product they need or what to fill out. Instead of four pages of conditional form, they're guided to the answer — by a natural-language assistant, a reimagined flow, or a mix of both. In under 3 minutes they reach a valid, fully-configured booking.

Behind the scenes, every conditional rule from our booking-form config still has to hold: the end state is a booking payload our system would accept as valid. The win is producing that valid payload through an experience that feels like a short conversation rather than a long form.

Data & Resources

You'll be working against a representative booking-form configuration that mirrors our production setup: country rules, the product catalog, participant setups, time slots, billing/shipping/consent fields, and the conditional logic that connects them. You'll also get:

- A dedicated hackathon booking form on our staging environment to build and submit against
- A testing form that does not send emails, so you can iterate safely
- Three worked client personas — each with the full scenario, the documents, and the exact booking payload our system expects (e.g. a cross-border Power of Attorney, an Austrian FlexCo incorporation, and a NIE application for Spain)
- Documentation for the sandboxed booking endpoint you submit appointment requests to
- **fonio voice accounts** — one fonio account per team (10 in total) is available if you want to build a conversational/voice-based path to the booking. More can be added during the build if needed; ask on Discord.

Access details (staging URLs, credentials, the technical documentation, and the fonio account logins) are shared with the teams on this track via Discord / email. *The staging system sends real emails — only test with your own email address or the no-email testing form, and don't harm our email reputation.*

Demo & Pitch Expectations

We want a live, working demo — not slides. Show a user (or persona) who arrives with just a document and no clarity on what they need, and reach a valid, fully-configured booking end to end in under 3 minutes, with the conditional rules respected.

On Day 1 we'll hand you a couple of concrete scenarios to run live — for example, a cross-border power of attorney with two signatories and express hard-copy shipping, and a simple single-signer certified copy. We care that the core flow actually works against the booking config, not that every screen is polished.

What Great Looks Like

Example directions — not the only valid ones:

Just Chatting. A natural-language assistant that interviews the user in plain language, maps their answers onto the booking config, asks only what's needed, and assembles the booking — ideally starting from the document they uploaded.

Smart guided flow. A reimagined, document-first flow that infers product, country and participants from the uploaded document and the conditional rules, collapsing four pages into a short guided path with smart defaults and only the relevant fields.

AI Agent / Skill. Book a notary appointment directly from Claude — install the notarity skill and you're ready to go.

Out of Scope

- Full production deployment
- Pixel-perfect UX polish — a working web prototype is enough
- Getting the time slots from notarity — just send a date in the request instead
- Building the admin-side config editor — we already have one in the admin dashboard

Judging Criteria

Your track is judged on these four criteria (totalling 100%):

Criterion	Weight	What it means
Functional MVP	30%	Does your solution actually work? Is it possible to book an appointment using it?
Technical Execution	30%	How is your project set up, and is the produced code / prompt(s) readable and maintainable?
User Experience & Design	25%	How intuitive is your solution? Does it help people understand how to book an appointment at notarity? Is it easy to use?
Pitch & Storytelling	15%	How well can you present what you worked on in the last 24 hours? Is it easy to understand for everyone?

Prize

notarity is awarding a different prize to each of the top three teams:

Place	Prize
1st	€1,000 in cash + a dinner with the notarity founders
2nd	Company incorporation via notarity (GmbH / FlexCo / OG) — we help you turn your idea into a real, registered business
3rd	An invitation to the 4th notarity Open tennis tournament (June 25, 2026) — no pro skills required, just food, drinks and good company

Plus, for all three teams: a mentorship-style standing invite to meet the founders roughly once a week — to talk through your project, get feedback, and brainstorm where it could go.

Mentors & Jury

Reach the notarity team on Discord throughout the build for help with the booking config, the API, scoping, and unblocking.

Role	Who	Notes
Mentor (on site)	Max Pointinger	Head of Product, Co-Founder & Developer — poured his life and soul into the existing booking flow and would love to see a fresh take
Mentor (remote)	Hendrik Böttcher	AI Ops, notarity
Mentor (remote)	Jakobus Schuster	CEO & Co-Founder, notarity
Jury	Max Pointinger	Selects the notarity Track Winner

Max is on site through the build; Hendrik and Jakobus are reachable remotely. Drop your questions in the notarity track channel on Discord.

Submission

One submission per team via the START Hack submission form (Tally), by the code freeze on Sunday, June 7 at 14:00. Late submissions are not accepted. The form link is shared on Discord.

What you submit:

- **Public GitHub repository** (MIT license) in the START Hack Vienna '26 GitHub organization, in the notarity folder, in your team's folder.
- **3-minute demo video** showing a real client persona completing a booking end to end — from a document in hand to a valid, fully-configured booking in under 3 minutes.
- **Written submission:** project title, one-line pitch, team & members, problem, solution overview, tech stack, and links.
- **Optional:** a live demo link, a pitch deck (PDF), and a recommended REPORT.md in your repo for the technical write-up.

Repository requirements

- Public at submission time, with an MIT LICENSE file at the root
- A README with setup and run instructions; be honest about what's working vs. mocked
- No secrets in the repo (API keys, tokens, credentials)

The Fine Print

Intellectual property

All code is committed to the START Hack Vienna '26 public GitHub organization under the MIT license. Hackers retain copyright of their work. By participating, hackers grant the case partner of their assigned track a perpetual, worldwide, royalty-free, non-exclusive license to use, modify, distribute, and commercialize their work product. Hackers keep the right to use, develop further, and commercialize their own work in parallel.

Judging flow

The notarity jury reviews all track submissions on Sunday from 14:00–16:00 and selects the Track Winner plus second and third place. The Track Winner then pitches live to an external jury from 16:00–17:00 for the overall award.
